About me

My experience as a web designer and developer have allowed me to understand each of the steps that is needed to implement any type of website, this involves from the initial information and steps on the interface through the implementation and start-up of the final release, going through each of the necessary steps for its proper implementation, I have participated in projects where I have built web sites from the graphic part to the interaction with data from some type of repository (Frontend and Backend), as well as in the implementation of security standards in case of that apply. Proven experience in the Business Intelligence area, including report creation and interface development, connection between systems, API development.
